ATTENTION ALL USERS OF ILS and RNAV (GNSS) PRECISION RUNWAY MONITOR (PRM) APPROACHES

Closely Spaced Parallel Operations

PILOT NON-PARTICIPANT PROCEDURE:

Pilots who are unable to participate will be afforded appropriate arrival services as operational conditions permit and must notify the controlling ATC facility as soon as practical, but at least 100 miles from destination / OR ON FIRST CONTACT.

LIST OF APPROVED PRM APPROACHES:

ILS PRM Rwy 15L, 15R, 33L, 33R

RNAV (GNSS) PRM Z Rwy 15L, 15R, 33L, 33R

Requirements: Approaches supporting PRM operations must have vertical guidance. For RNAV (GNSS) approaches, flight director or autopilot and GNSS are required.

General, applicable to all approaches

Review procedure for executing a climbing and descending PRM breakout.

Breakout phraseology: "TRAFFIC ALERT - (*Call Sign*)
TURN (LEFT/RIGHT) IMMEDIATELY HEADING (degrees),
CLIMB/DESCEND TO (altitude)."

All breakouts: Hand flown, initiate immediately.

Descending on the glideslope/glidepath ensures compliance with any charted crossing restrictions.

Dual VHF Comm.: When assigned or planning a specific PRM approach, a **second** receiver will be required to be tuned to the PRM monitor frequency. Expect the following sequence in ATC communication transfers:

- ARRIVAL FREQ - CHECK IN = ATC *VECTORS* TO FINAL and *APPROACH CLEARANCE*

When directed by ATC, switch to:

- APCH MONITOR CONTROLLER FREQ = CHECK IN – But maintain a listening watch on the PRM frequency on the secondary VHF radio receiver.

When directed by ATC, switch to:

- TOWER CONTROLLER FREQ = *LANDING CLEARANCE* - But continue **monitoring** PRM FREQ on secondary VHF radio receiver.

If later assigned the same runway, non-PRM approach, consider it briefed provided the same minimums are utilized. PRM related chart notes and PRM frequency no longer apply.

TCAS during breakout: Follow TCAS climb/descend if it differs from ATC, while executing the breakout turn.
